Filing Date: Q4 2025

Applicant: TRYONYOU / ABVETOS Intelligence Systems

TITLE: Context Engineering System for Adaptive User Experience

ABSTRACT:

A novel system for context-aware engineering that adapts user experiences through emotion detection, behavioral analysis, and real-time optimization. The system integrates multiple modules including Personalized Avatar Units, Collaborative AI Production, secure payment verification, and automated social contribution mechanisms.

CLAIMS:

1. A context engineering system comprising emotion detection and adaptive behavior mapping for personalized user experiences.
2. The system of claim 1, further comprising AI-driven production optimization and pattern generation capabilities.
3. The system of claim 1, incorporating blockchain-based verification and secure transaction processing.
4. The system of claim 1, including automated social contribution distribution mechanisms.
